

EMERALD

AUTOMATION

HMI & MACHINE RFID LOGIN SYSTEM

LOG INTO YOUR EXISTING MACHINES FAST & SECURELY

Emerald Automation is now offering a system to enable logging into HMI Screens quickly & more secure.

Most OEM equipment offers HMI's (Human Machine Interface) for machine setup, changes, and information. The process of logging into the HMI is often tedious due to small buttons & forgotten passwords. An additional risk is losing or even having the password become common knowledge.

Emerald Automation is now able to integrate convenient & secure RFID scanners into your plant equipment.

Whether you have existing employee badges or need custom access cards developed for you, logging into your equipment can be as easy as opening your garage door! A simple Swipe of your badge across the scanner enables users to log in automatically. Logging out is just as easy & quick.

Stop wasting your precious time 'pecking' away at small login screens, and quickly get to the HMI page you are looking for. The quick & secure method incorporates the most state of the art technology in the industry.

Contact Emerald Automation today to discuss specific applications and opportunities & pricing.

Benefits:

- *Secure login removes the possibility of a stolen or lost password.*
- *Save time punching in your username & password by simply swiping your card across the scanner.*
- *Specify custom security levels for each user.*
- *Track employee access & changes.*
- *Use existing company issued badges or Emerald Automation Supplied badges.*

Stop the Frustrating Madness
of Manually Logging into your HMI!
